

## Regulation (EU) 2019/1021 - EU POP Regulation

Dear Sir and Madam,

Schoch Edelstahl GmbH is a manufacturer and distributor of stainless steel parts (flanges, fittings, fittings and rotary-milled parts).

The **Regulation (EU) 2019/1021 on persistent organic pollutants** is an EU regulation known as the **EU-POP Regulation**

The Regulation prohibits and restricts the production, placing on the market and use of **Persistent Organic Pollutants (POPs)**.

It also involves limiting the release of such substances and laying down provisions for the disposal of waste consisting of, containing or contaminated by such substances.

We have asked our suppliers in this regard. The feedback received so far and the comparison carried out by us with the list of substances subject to the POP Regulation (<https://echa.europa.eu/de/list-of-substances-subject-to-pops-regulation>) that our products do not contain any persistent organic pollutants.

This is our current state of knowledge and we are consistently pursuing this issue.

We will be happy to answer any further questions you may have.

Yours faithfully

Lars Schoch  
Managing Director  
SCHOCH EDELSTAHL GmbH  
Hausach, 17th January 2024
